

TEACHING with TECHNOLOGY

2

Edited by G. Christopher Clark and Sherry A. Clouser, this book presents seventeen peer-reviewed essays by individuals who have integrated technology into university courses. Many disciplines and technologies are represented, and the writing is practically oriented, focusing on ways in which technology helped students learn.

This book is presented by the Learning Technology Consortium, a partnership of institutions with similar instructional goals, strong technology and faculty support programs, and an interest in collaboration in the area of teaching and learning with technology.
